### (54) ACTIVE MATRIX TYPE FACE PRESSURE INPUT PANEL

#### (57) Abstract:

**PURPOSE:** To obtain an inexpensive active matrix type face pressure panel by increasing the detection area with definition as high as that of a semiconductor circuit.

**CONSTITUTION:** A flexible pressure sheet 2 provided with a conductive film 2a on the lower surface thereof is laminated on a circuit board 3 comprising an insulating board 10 arranged with scanning electrode lines 30, 40 in matrix with a thin film transistor 20 and a conductive contact plate 50 being forced at each intersection such that the conductive film 2a of the pressure sheet 2 touches the conductive contact plate 50 of the circuit board 3. The gate and drain of the thin film transistor 20 are connected, respectively, with the scanning electrode lines 30, 40 and the source of the transistor 20 is connected with the conductive contact plate 50.
